St. John's, NL | **Canadian Permanent Resident** | Looking for a full-time role, remote or willing to relocate

SUMMARY

Four years as a web developer at a small agency in Dhaka, where I shipped 12 client sites, often as the only developer. I'm now finishing a **Master's in Software Engineering** at Memorial University, building in React, TypeScript, Node.js and Python, and spending a lot of my time on testing.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, PHP, SQL, Java, HTML, CSS
Frontend: React, Next.js, Tailwind CSS, TanStack Query, Bootstrap, jQuery
Backend: Node.js, Express, Laravel, Flask, REST APIs, JWT authentication
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase, Mongoose, TypeORM
Testing: Vitest, Jest, Pytest, grammar-based fuzzing
Tools: Git, GitHub, Vercel, WordPress, WooCommerce, cPanel

EXPERIENCE

Web Developer, HYPE Dhaka — Jun 2018 – Jun 2022
Digital agency in Dhaka, Bangladesh. PHP, Laravel, WordPress, WooCommerce, MySQL, JavaScript

- Built **12 client websites**, mostly on WordPress and WooCommerce, and looked after 5 once they were live. With only two developers, I usually ran projects with the client from first call to launch.
- Built the **ASUS review campaign site** in Laravel. Buyers entered in Bengali or English with a review link and invoice, and ASUS approved entries and edited page copy from an admin panel without our help.
- Wrote a contest site in plain PHP and MySQL that took **3,000 registrations** during a two-week promotion. Every form was validated on the server.

PROJECTS

Swipe-Based 2FA (MUN course project, team of 3) — Case study | Code
React, Vitest, Python, scikit-learn, Firebase, Android

- An Android app that checks if the person swiping is the account owner, using SVM and KNN models in Python.
- I built the **React dashboard** for watching verification attempts live, with confidence scores and per-user success rates, and wrote its **43 Vitest tests**.
- The project finished with **232 passing tests** and hit its targets for accuracy, false accepts and response time.

Parser Fuzzing Tools (MUN course project) — Case study | Code
Python, coverage.py

- Wrote an HTML fuzzer that builds valid syntax trees from a grammar, then breaks them. It crashed a test parser **525 times in 1,000 runs**; random mutation never did.
- Pointed a second fuzzer at Python's json module. **674 of 5,000** generated inputs (13.5%) crashed it.

AI Blog Platform (React, Node.js, Express, MongoDB, Gemini API) — Case study | Live | Code
A MERN blog where admins get a first draft from Gemini, edit it and publish. Has JWT login and comment approval.

This Portfolio (React 19, TypeScript, Vite, Tailwind CSS) — tanzim-rahman.com
Rebuilt in TypeScript and ready to switch to the Express, Prisma and PostgreSQL API I'm writing now.

EDUCATION

MASc, Software Engineering, Memorial University of Newfoundland — Sep 2025 – Apr 2027 (expected)
BSc, Computer Science, BRAC University, Bangladesh (WES verified) — 2020

OTHER WORK EXPERIENCE

Cash Office Supervisor, Sobeys. Balanced about $4,000 a day and trained about 10 new staff. — May 2024 – Dec 2025
Claims Representative, Intact Insurance. Up to 30 claims a day; rated "Exceeds Expectations". — Nov 2022 – Apr 2024

CERTIFICATIONS

Meta Front-End Developer (2023), Google Foundations of UX Design (2022), MUN Professional Skill Development (2026)
